

JOHN WHITE & SON

MAY 2024

FOOD INDUSTRY FOCUS

Welcome to the May edition of the John White & Son newsletter. This month, we are focusing on how our extensive range of products and services can help the food industry meet its unique challenges. With over 100 years of experience, JWS is dedicated to providing innovative and reliable solutions tailored to the specific needs of food industry clients.

Weighing Solutions for the Food Industry

Standard Weight Check JWS has a long-standing history of providing weighing solutions to the food industry, from simple ingredient weight checks to large pallet checks. The range of systems includes:

- **Laboratory Balances:** For precise measurements in internal laboratories.
- **Bench Scales:** Integrated with weight displays for standard weighing needs.
- **Platform Scales:** To weigh incoming goods on-site.
- **Pallet Truck Scales:** For weighing products during intra-site movements.

These solutions are customisable in materials, including Mild Steel and Stainless Steel, to suit specific site requirements.

Static Checkweigher

JWS offers various static checkweighing solutions to ensure product accuracy on production lines, aiding in compliance with regulatory requirements like the Average Weight Legislation. These solutions help in reducing packaging giveaways and ensuring consistent product weight.

Average Weight Bench Scale

Production Line Industrial Scale

Did you know?

Did you know that there are **3** rules, also referred to as the '**Three Packers Rules**' that all packers and importers of packaged goods need to comply with?

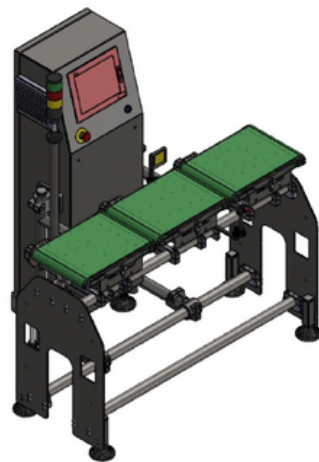

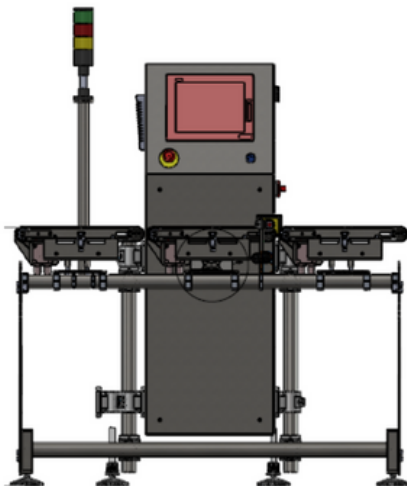

JWS are on hand to provide clients involved in supplying packaged goods with the necessary advice and solutions to ensure that they meet the requirements for the 'Weights and Measures (Packaged Goods) Regulations 2006 (SI 2006/659)'.

Dynamic Checkweighing

For dynamic checkweighing, JWS offers:

- **Stand-Alone Checkweighers**
- **Checkweighers with Reject Systems**
- **Checkweighers with Inspection Systems**

These systems ensure compliance with all food industry regulatory requirements and enhance production efficiency by integrating real-time inspection and rejection capabilities.

Statistical Checkweighing Software

JWS's statistical checkweighing software is designed for prepackaged goods, enabling legal compliance and internal statistical checks. This software ensures accuracy and consistency in product weights, aiding in quality control and regulatory adherence.

Production Line Software

JWS provides advanced software solutions for production lines, allowing Quality Control Managers to:

- **Monitor Each Scale:** Real-time viewing of each scale in the production line.
- **Control Operations Remotely:** Manage operators, scales, and products from a central PC software.
- **Link Multiple Scales:** Enable centralised control and adjustments to product or target settings without physical interaction with each scale.

These software solutions enhance operational efficiency, ensure consistent product quality, and streamline quality control processes across production lines.

JWS's comprehensive solutions for the food industry range from basic weighing systems to advanced dynamic checkweighing and integrated software solutions. With over a century of expertise, JWS ensures that its products meet all regulatory requirements and enhance operational efficiency for food industry clients.
